Abstract	ii
Acknowledgments.....	iii
Nomenclature	vi
List of Figures	viii
List of Tables.....	x
1 Introduction	1
2 Literature Review.....	7
2.1 Effect of Boundary Layer Thickness on Secondary Flows	8
2.2 Effect of Temperature Gradients on Secondary Flows.....	13
3 Theoretical Analysis of Secondary Flows.....	18
3.1 Theoretical Development of Classical Secondary Flow.....	24
3.2 Effects of Compression and Viscosity on Classical Secondary Flow	29
3.3 Methods of Predicting Secondary Losses at the Endwall.....	32
4 Computational Methods	37
4.1 Computational Domain.....	38
4.2 Meshing Procedures.....	44
4.3 Numerical Simulation Techniques.....	49
4.4 Computing Resources	53
5 Experimental Design and Flowfield Measurements	59
5.1 Test Section Design	64
5.2 Cascade Inlet Flowfield	68
5.3 Instrumentation and Flowfield Measurement Techniques.....	74

6	CFD Benchmarking.....	80
6.1	CFD Analysis Methods and Definitions.....	82
6.2	Grid Independence Study.....	86
6.3	Comparison of Turbulence Models	95
6.4	Leading Edge Region.....	104
7	Experimental and Computational Results	112
7.1	Low-Speed Parametric Study	113
7.2	High-Speed Engine Conditions	123
7.3	Comparison of Low-Speed and High-Speed Conditions.....	140
8	Conclusions and Future Work.....	152
8.1	CFD Benchmarking	153
8.2	Flowfield Measurements.....	155
8.3	Parametric Study and Engine Simulations.....	158
8.4	Recommendations for Future Work	162
	Appendix A: Data for Stator Vane Geometry.....	166
	Appendix B: Uncertainty Analysis Calculations	171
	Glossary.....	182
	References	185
